Taree Demo Hospital - Radiology Report

FICTIONAL DEMONSTRATION DOCUMENT - NOT A REAL PATIENT - NOT FOR CLINICAL USE

MRI Brain without contrast (synthetic phantom)

Technique: Multiplanar multisequence MRI of the brain (demonstration data).
Findings: Small well-defined hyperintense focus in the right parietal region measuring approximately 9 x 7 mm. No mass effect or midline shift.
Ventricles and sulci are within normal limits for age.
Impression: Small right parietal focus - recommend clinical correlation and follow-up MRI in 6 months.

Reporting radiologist: Dr. Demo Radiologist (fictional)
